EDUCATION

Bharati Vidyapeeths College of Engineering, Delhi

Nov 2020 - Jun 2024

Bachelor of Technology [B.Tech] in ECE

CGPA: 8.3

EXPERIENCE

Tata Consultancy Services

Jan 2025 – Present

Packaged App Development Associate — Gen AI Capability Team

- Architected a 7-agent Data Quality Agentic Pipeline using AutoGen 0.5 & CrewAI for synthetic data generation, discovery, profiling, rule creation/review, and SQL script generation & validation—reducing manual DQ effort by 70%+ and collaborating with cross-functional teams to roll it out on Microsoft Azure for enterprise usage.
- Developed a multi-agent test automation framework using LangGraph for automated test planning, test-case creation, script generation, execution, and result validation—cutting manual testing effort by 85%+. Operationalized the suite on AWS for scalable batch execution.
- Built and productionized MCP (Model Context Protocol) servers—exposing LLM agents as reusable services and integrating them with AWS AgentCore (AWS Kiro) for standardized cross-system integration across client workflows.
- Designed a FastAPI backend with Redis for background task processing and PostgreSQL for workflow orchestration, prompt storage, run tracking, metadata management, and audit logs.
- Built an NLP-driven document intelligence module using transformer embeddings to extract structured insights from unstructured client documents, enabling automated rule suggestions and improved agent decision-making.

WYC - Way Your Child

Jul 2023 - Nov 2024

Full Stack Developer

- Developed core modules for a School ERP system using Node.js, React, and Next.js.
- Architected relational schemas in PostgreSQL, ensuring data integrity across 10+ student management modules.
- Enhanced UI responsiveness by 30% through efficient API integration and React optimization.

PROJECTS

Agentic AI Crawler

- Created an agentic web crawler using Gemini API that autonomously extracts, summarizes, classifies, and organizes website content into a structured navigation tree.
- Implemented FAISS-based semantic search using Gemini embeddings and visualized page relationships using Graphviz, enabling content discovery through embeddings + graph traversal.

TECHNICAL SKILLS

AI and ML: Generative AI, LLMs, Agentic AI (AutoGen, Crew AI, LangGraph), RAG, NLP, Transformers, Semantic Search (FAISS), Deep Learning (TensorFlow, Keras)

Programming: Java, Python, SQL (Postgres), JavaScript, HTML/CSS

Cloud and DevOps: Azure, GCP, AWS(basic), Docker, Git, Streamlit, FastAPI, Vertex AI, MLflow

CERTIFICATIONS

- Microsoft Certified: Azure AI Engineer
- Microsoft Certified: Azure Developer
- Microsoft Certified: DevOps Engineer Expert

ACHIEVEMENTS

TCS AI Hackathon — Spark Achievement: Developed an Agentic Data contract Governor that automatically generates, validates and deploy data contracts for Producers and Consumers

TCS AI Hackathon — Idea Igniter: Recognized as a top milestone achiever for innovative thinking and successful idea submission among the top entries.

TCS Learning Achievement Award: Recognized for outstanding contribution, dedication, and commitment as an inspiring role model to colleagues.

Project Winner (1st Place): Awarded first place for the "Agentic AI Crawler" project at BVCOE's annual showcase
